DETAILED ACTION

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-5 are rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility. The device recited in the claims is not based on any scientific or technical grounds. The disclosure contradicts all known principles of physics and is replete with terminology that does not have any scientific or technical meaning (“the present invention related to identifiable structural compositions and characteristics based on quantum subatomic correlation of deterministic values and propagations. By analyzing these values or propagations, novel comparisons can be expressed in multiple formats for obtaining more finite signal, energy, and particle interactions” (specification, page 1); “quantum subatomic conditions can override those regulations enabling features of like and unlike charged particles attracting and repelling simultaneously to an nth degree of field degradation and dimension shift” (page 3), etc. .
